Cembrit Cladding System

Coloured by the way you think

Extending your design palette

Colour, shading and texture are three of the most powerful visual tools in any architect or designer's palette. The sumptuous colours in an extensive range of Cembrit fibre-cement cladding boards give you free rein to apply and exploit the visual opportunities on the cladding of any building.

Product navigation

To help you find the ideal product for your particular project or design, Cembrit cladding boards feature an easy-to-use system that gives you – and your clients – full leeway for benefiting from the multiple advantages of these thin, lightweight fibre-cement boards.

The product ID system also makes it easy to distinguish between products with different characteristics.

There are thousands of possible combinations ... with lots of freedom to choose.

Navigating the world of Cembrit colour. The system is structured around the unique colour capabilities of Cembrit cladding boards, structured around four specific variables.

0 Grey

1 Black

2 White

3 Red

5 Yellow

6 Green

7 Blue

Cembrit

Coloured by the way you think

BASE COLOUR

The third number in the product ID describes the core colour – the colour that's visible on the edges, or if you make inserts or holes. Sometimes this is an elegant match for the front surface of the board. And sometimes it isn't ever seen, or any colour difference simply doesn't matter.

TYPE OF BOARD

The letter that the product ID starts with describes the distinctive feature of that particular type of board.

Patina (P)
Cover (C)

Solid (S)
Transparent (T)

SHADES OF SUCCESS

The second number in the product ID describes the shade of the surface.

The lightest shade of a colour is defined by the number 0, while the deepest and most intense surface shade bears the number 9.

COLOUR GROUP

The first number in the product ID describes the colour group:

0 Grey	5 Yellow
1 Black	6 Green
2 White	7 Blue
3 Red	

Each colour group ranges from soft, delicate, light tones to intense, saturated, dark colours, graduated over 61 standard colours.

Cembrit standard colours are specially selected to suit European architectural styles and building traditions.

Your choice. In addition to the range of colours and shades, Cembrit cladding boards are available with four groups performance and distinctive characteristics.

Cembrit Cover

Cembrit Patina

Cembrit Cover is the ideal solution if you prefer the strongest colours and bolder design statements. The natural grey fibre-cement core is completely covered by a layer of water-based acrylic paint, with 26 standard Cembrit colours and more than 2000 NCS®© colours to choose from.

Cembrit Patina has a natural, textured surface. You can see the fibre and natural characteristics of the raw materials, and you can see and feel the sanding lines on the surface. As the seasons change and the years pass, the natural ageing of the fibre cement leaves subtle traces on the surface, and the cladding will gradually acquire a distinctive patina.

Cembrit Solid

Cembrit Transparent

The special thing about Cembrit Solid boards is that they're the same colour all the way through. Each of the core colours is matched with a full-coverage painted surface in vibrant yet resilient colours. This means if you choose Cembrit Solid boards to provide a façade with a particular colour, every board will feature that colour on every surface and edge, and with the same colour on the edges of any cut-outs or drilled holes.

Cembrit Transparent cladding boards combine the textured nuances and natural characteristics of the base board with a long lasting performance of the transparent top coat. The colour added to the fibre cement reveals and highlights the fibres and other raw materials that provide its strength and character. The extremely durable transparent coating then protects the board and ensures a smooth surface with a long service life.

Paint performance

Cembrit cladding boards spend years, decades and sometimes even longer exposed to harsh sunlight, big temperature fluctuations and merciless weather conditions. That's why all the water-based acrylic paint we use features high UV protection and is certified for use in all climates and in kinds of weather.

The cutting advantage

The edges of cladding boards play a big role in the visual impact of the product, and the overall sense of quality. The edge-on impression can often be a key design feature, or decisive for the big-picture impression.

Cembrit manufacturing technology now includes advanced cutting equipment that we've adapted from its conventional use in modern furniture production, making it possible to combine board cutting with trimming and sanding the edges.

This gives a perfect, consistent finish that you can rely on to look attractive from all angles, with the big added benefits of greater durability. Another big advantage is that the bevelled edges help prevent damage to the paint during installation.

Cembrit is the only manufacturer of fibre-cement products with the technology to automatically seal the edge of boards while cutting.

Packaged-for-installation logistics

The speed and cost-effectiveness of installation can play a big role in project success and profit margins. It can take a long time and a lot of on-site manpower to sort through a delivery and find the exact board you need. That's why we can package the boards on pallets in the right order for you to move and install. We can even offer pre-cut boards that have the specific installation location printed on the protective foil!

Protective covering, easier installation

Once on site, cladding boards often get handled roughly. They have to be transported, handled and moved manually and with mechanical lifting equipment. Not surprisingly, materials can get scratched and damaged.

To prevent all this, the fronts of Cembrit cladding boards are covered with a thick self adhesive foil, which will protect the boards from scratches and other damage. In cases where cutting, drilling and handling of the boards is carried out just before installation, this protective foil usually does away with any need to clean the full cladding after installation work is complete. This saves on both time and costs.
