

A material that bows to your creativity

ROCKPANEL Stones façade panels literally reach for the top. Thanks to their low weight, they are perfectly suited for application in taller buildings. What's more, these flexible panels made of the natural raw material basalt also expand your creative scope. Without any special pretreatment, they can be bent and formed into impressive convex and concave shapes, thus enabling architectural highlights with striking structural contours.

Façade panels distinguished by their lightness

We have virtually liberated façade panels from gravity. Although these robust panels consist of basalt – a volcanic rock – they impress by their low weight, which makes them ideally suited for application in rear-ventilated façades. Inspired by nature, the new ROCKPANEL Stones series offers eleven designs to choose from for a range of spectacular architectural highlights.

Mineral Designs

Mineral Chalk

Mineral Silver

Mineral Graphite

Mineral Clay

Mineral Rust

Basalt Designs

Basalt Zinc

Basalt Iron

Basalt Anthracite

Sustainably impressive

The new ROCKPANEL Stones series is extremely durable and amazingly easy to handle. The weatherproof material has proven itself to be especially impervious to fluctuations in temperature and humidity, and it complies to the highest fire safety requirements. Besides, it is highly sustainable: an independent assessment confirmed a lifespan of 60 years for ROCKPANEL façade panels, which are also almost fully recyclable.

Economic efficiency and intriguingly easy assembly

ROCKPANEL Stones façade panels combine the puristic impression of stone with unparalleled processing ease: these panels can be easily cut and installed. This also pays off with higher structures where low weight and easy handling play a significant role, also in terms of economic efficiency.

ROCKPANEL façade panel characteristics:

- A broad range of natural looking designs
- Easy to process – like wood – but with the robustness of stone
- Can be processed with standard wood processing tools
- Extremely weatherproof and temperature-resistant
- Bendable without pretreatment
- Produced from the fully recyclable raw material basalt
- Durable, colourfast and easy to maintain

Dimensions

Panel thickness: Durable: 8 mm

Xtreme: 8 mm (from 100 m² onwards)

FS-Xtra: 9 mm (from 100 m² onwards)

Panel width: 1200 mm (1250 mm from 100 m² onwards)

Panel length: 3050 mm (2500 mm from 100 m² onwards)

Concrete Designs

Concrete Ash

Concrete Platinum

Concrete Sand
