Turn your vision into design

Every building has its own story. With ROCKPANEL façade cladding you can provide your building with a distinctive character. Bring its story to life with exceptional façades and remarkable building contours.

The flexible but robust board material can be curved and shaped easily to any form you require without special pretreatment. Whether traditional or contemporary, formal or unconventional, understated or striking, for refurbishments or new build projects, with ROCKPANEL façade cladding you give every building a unique look.

The image features three rectangular panels of varying shades of dark green and black, arranged in a row from left to right. The panels are set against a light gray background. The leftmost panel is a solid black. The middle panel is a dark, almost black green. The rightmost panel is a vibrant, deep emerald green. A dark blue rectangular box is positioned on the left side of the image, containing white text. The text reads: "Give your façade a brilliant sparkle".

Give your façade
a brilliant sparkle

The new design series, ROCKPANEL Brilliant, offers you unlimited aesthetic possibilities: regardless of whether your building is designed to blend into the background or meant to make a bold statement in an urban environment. Set your creativity free with 16 sparkling designs, each offering an astounding play of colours. Sunlight or artistic spotlighting further enhances the radiance of your building. As the light constantly changes throughout the day, the façades' appearance reflects that in intensity and hue. With ROCKPANEL Brilliant you can create a truly unique signature for your building.

New hotel build with sea view

Limitless design possibilities

- Broad range of 16 aesthetic designs
- Easy curving and bending without special pre-treatment
- Weather, temperature and UV resistant

Unlimited design freedom, made possible by the right selection of materials, to turn your creative vision into design. The broad range of brilliant finishes available with ROCKPANEL Brilliant allows you to create architectural accents that give your building a signature look. The natural properties of the cladding boards allow them to be curved and bent into any shape, further extending the scope of your design possibilities.

Vocational college refurbishment

Fire-safe without aesthetic compromises

- Extra fire-safe solution for new builds and refurbishments: all ROCKPANEL boards meet the requirements for European fire class B-s2, d0 as a minimum
- To fulfil even the highest fire safety requirements: ROCKPANEL FS-Xtra can meet the requirements for European fire class A2-s1, d0

Fire safety regulations governing public buildings such as schools, hospitals and airports represent a particular challenge to design aesthetics. With ROCKPANEL Brilliant you can realise your architectural vision with the guarantee of optimum fire safety. All ROCKPANEL façade boards meet the requirements for European fire class B-s2, d0 as a minimum. ROCKPANEL façade cladding in FS-Xtra grade provides you with an ideal, cost efficient and highly sustainable aesthetic solution for buildings where greater fire safety is needed or preferred. So you can express your design creativity – without compromising safety.

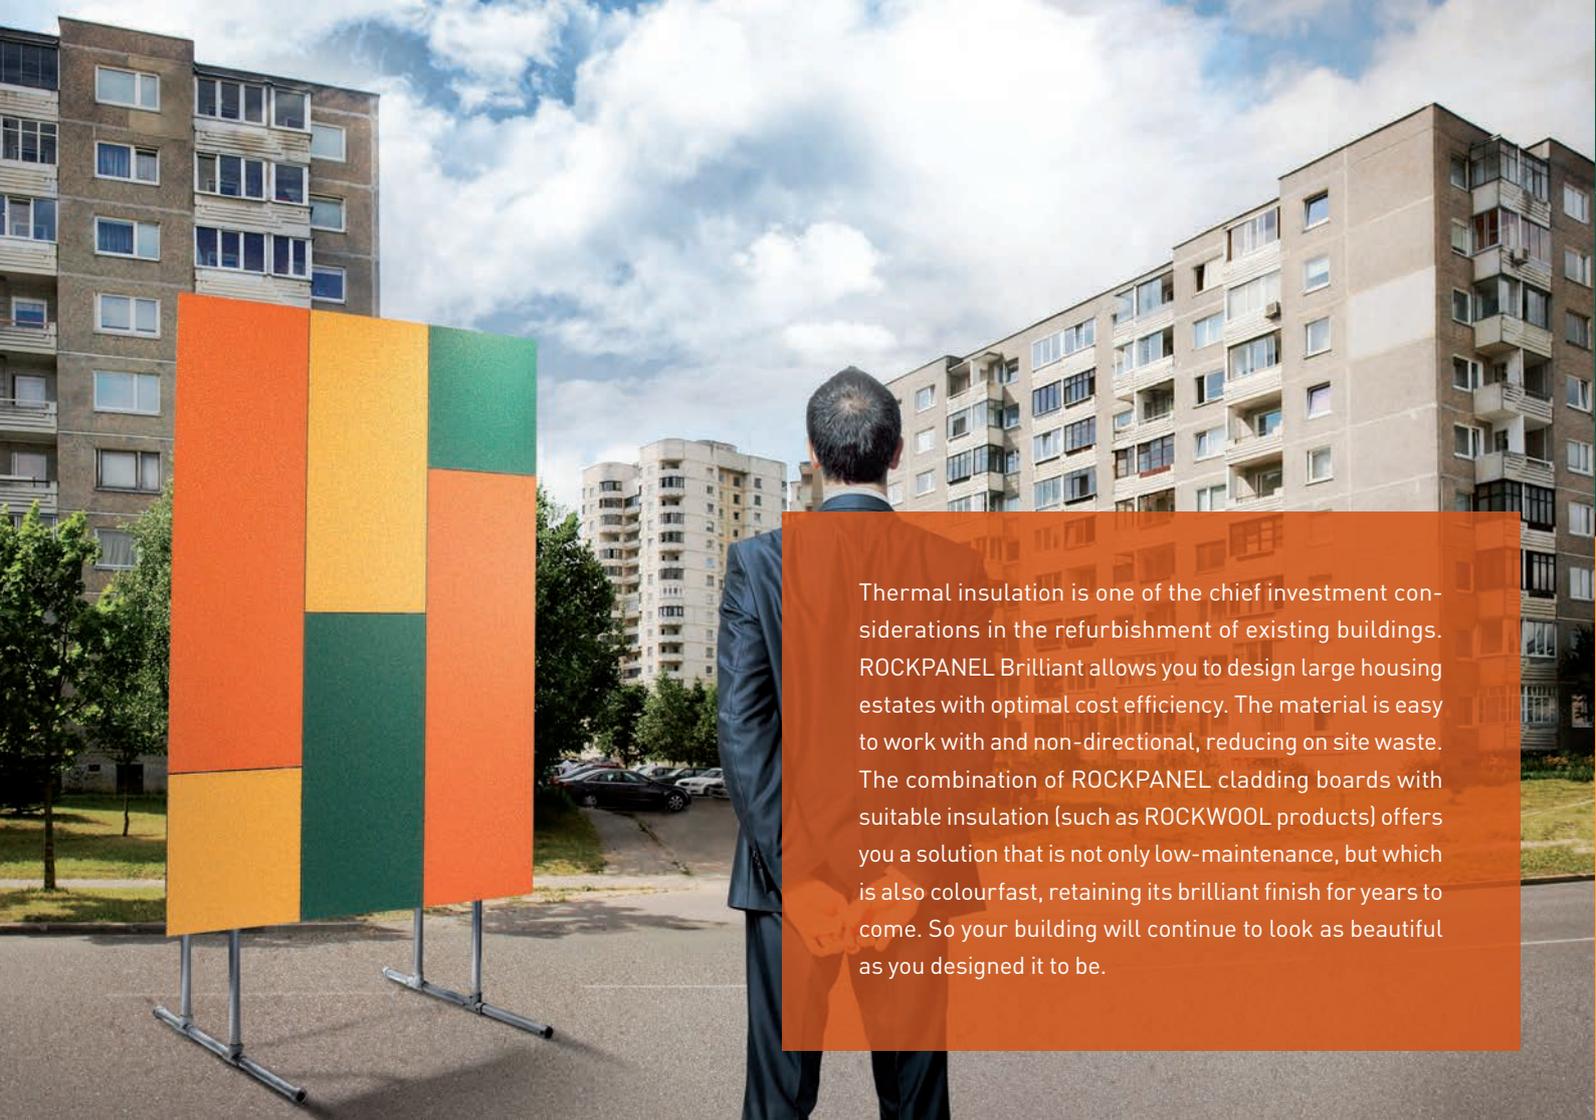

Senior citizens home in a recreation area

In perfect harmony with nature

- Produced from the natural resource, basalt
- Fully recyclable
- Non-directional, for minimal waste and installation time

A photograph of a construction site in autumn. In the foreground, a large, rectangular panel with a copper or bronze finish is mounted on a metal frame. Behind it, a multi-story building is under construction, completely encased in a complex network of metal scaffolding. The background is filled with trees displaying vibrant autumn foliage in shades of orange, yellow, and red. The sky is a pale, overcast blue. The overall scene suggests a modern building project integrated with a natural, seasonal environment.

Building projects can only be sustainable when they are built with respect for our environment. With ROCKPANEL Brilliant you can be sure of making a responsible choice, since the board material is produced from the raw material basalt, a natural volcanic stone with virtually inexhaustible, readily accessible reserves. ROCKPANEL Brilliant is also non-directional, ensuring minimal waste and installation times – just one of the many facets of this sustainable solution.

Thermal insulation is one of the chief investment considerations in the refurbishment of existing buildings. ROCKPANEL Brilliant allows you to design large housing estates with optimal cost efficiency. The material is easy to work with and non-directional, reducing on site waste. The combination of ROCKPANEL cladding boards with suitable insulation (such as ROCKWOOL products) offers you a solution that is not only low-maintenance, but which is also colourfast, retaining its brilliant finish for years to come. So your building will continue to look as beautiful as you designed it to be.

Housing estate refurbishment

Long term and cost efficient investment

- Workable as wood: minimal installation costs
- Low material waste
- Durable, colourfast and low-maintenance

Commercial and industrial buildings must be consistent with a company's image as well as meeting the highest standards of performance and economic efficiency. ROCKPANEL Brilliant enables both design freedom and cost efficient construction. It is as robust as stone, yet significantly lighter than standard cladding material, and as easy to work and to install as wood. This helps to reduce construction costs for developers. ROCKPANEL façade boards are colourfast and weatherproof, and have been independently certified to offer a life span of no less than 60 years.

Logistics centre new build

Modern aesthetics meet economic efficiency

- Easy assembly ensures cost efficient construction
- Lower maintenance costs due to a certified life span of no less than 60 years
- Easy installation due to its light weight

Sustainable façade cladding

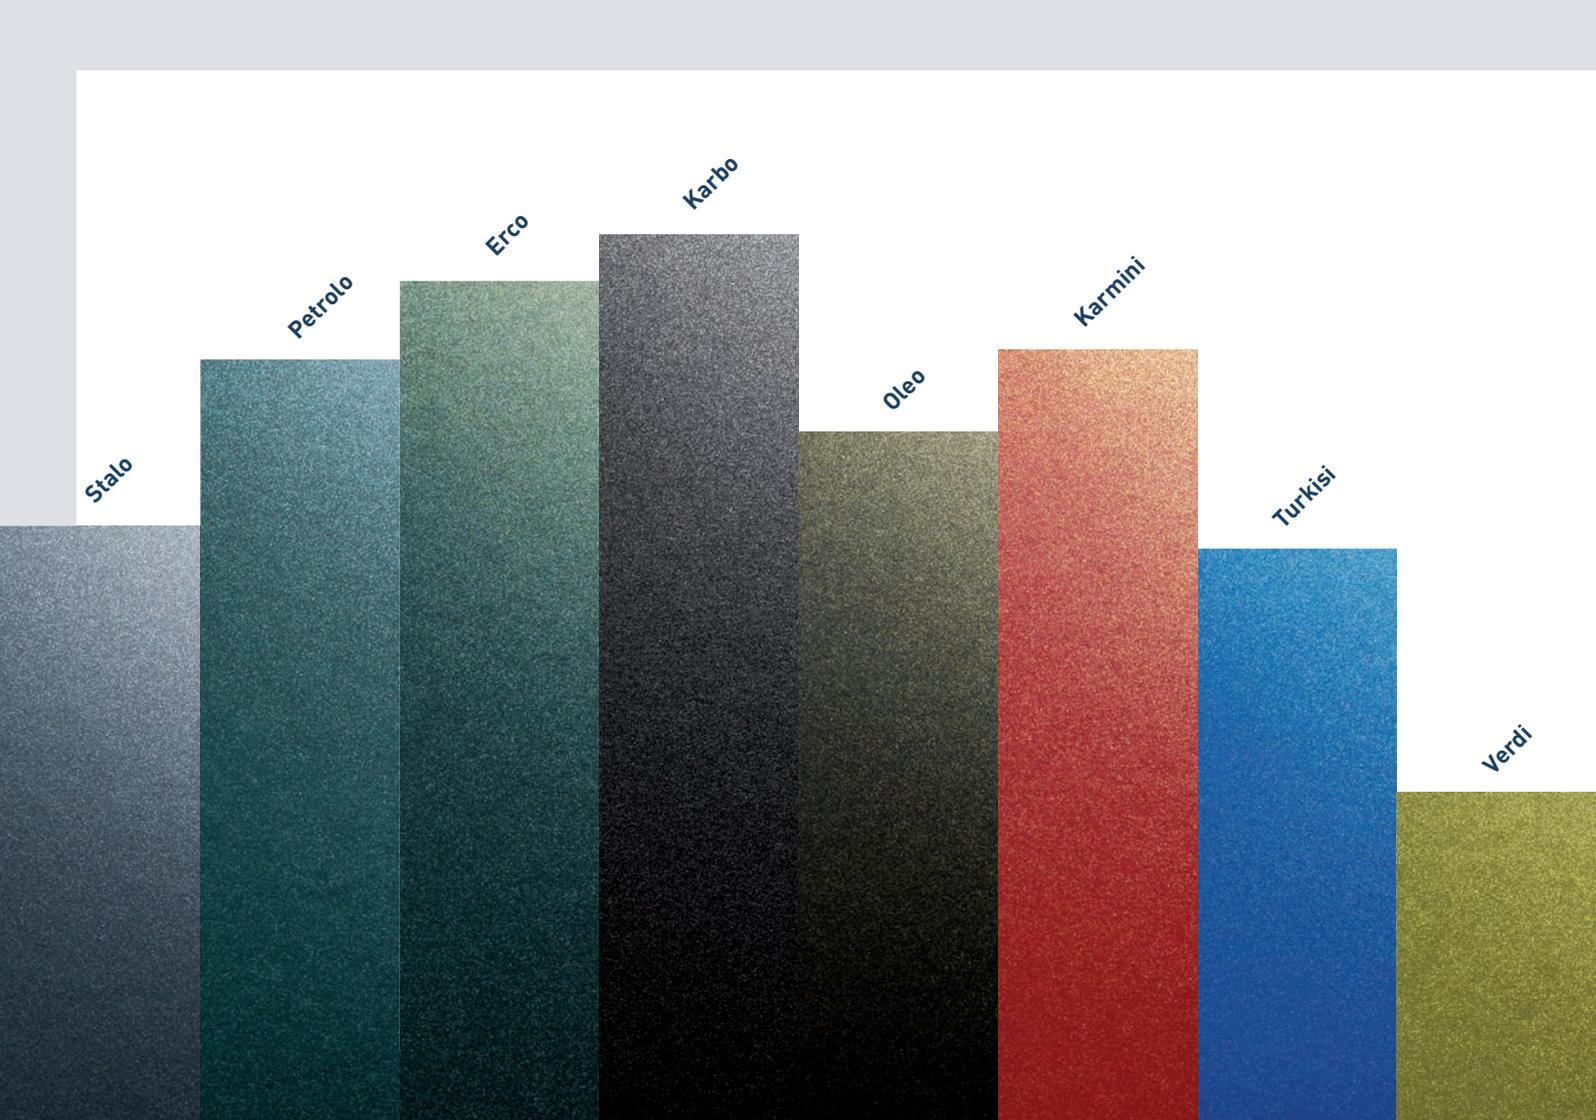

Something to BRE proud of...

- Highly efficient: over 400 m² of cladding can be produced from 1 m³ of basalt
- Environmental friendly production process using green energy
- ROCKPANEL products BRE Global A+/A rated

A photograph of a forest with a sun flare on the left and a modern architectural panel on the right. The panel is composed of several rectangular sections in shades of brown and white, mounted on metal legs. The background is a dense forest of bare trees, suggesting an autumn or winter setting. The sun is low in the sky, creating a bright flare and casting long shadows on the ground covered in fallen leaves.

ROCKPANEL Brilliant originates from a natural raw material, efficient manufacturing process and offers a long lifespan. Add to that the fact that the boards are made of up to 100% recyclable raw material and that ROCKPANEL products fit in effortlessly with every sustainable building process. The ROCKPANEL Group is the first cladding manufacturer to receive a European Environmental Product Declaration (ECO-EPD) from BRE Global, covering almost its entire range of products. ROCKPANEL façade cladding boards are also independently approved as A+/A rated due to their high level of sustainability. This respected accreditation provides assurance that you are making a responsible choice with regards to the environment.
