ALUMINIUM COMPOSITE PANEL / MANUFACTURED BY FAIRVIEW

ABOUT THIS MANUAL

This manual has been developed to effectively assist fabricators and contractors to work with Fairview's Aluminium Composite Panel; Vitrabond.

Due to the uncontrollable conditions and methods of job scope, as well as the variable skills and judgment of users/installers and the quality of equipment, tools, etc., the suggestions and recommendations contained in this manual are provided without warranty.

The information and recommendations contained herein are believed to be correct at time of publishing August 2019.

Fairview reserves the right to revise the contents of this manual.

PREFACE

Radical reappraisals of the form and function of buildings are leading to questions being asked of traditional cladding systems. The emergence of new materials and manufacturing technologies are challenging preconceived notions of the engineered façade. The growing popularity of composite panels in recent years is due to the increasing desire for panels that not only look clean and modern, but also offer rapid installation and provide reliable long-term performance. Vitrabond Aluminium Composite Panel (ACP) by Valcan addresses these changing requirements, enabling a modern and high quality envelope construction to be achieved, within the strictest timeframe and budget.

COMPANY & BACKGROUND

Valcan specialises in the design, manufacture and distribution of a suite of quality façade solutions throughout the United Kingdom, Australia and North America. With almost 30 years' experience in the façade industry, we are dedicated to consistently facilitating the successful delivery of innovative facades that meet the requirements and vision of each project.

With one of the largest stock holds in the UK, we have the ability to ensure a consistent and timely supply to our dedicated installer network, in addition to this our flexible and innovative approach allows us to work closely with our clients on each project to deliver the best possible outcome. Valcan continues to develop our range of façade

solutions and maintain a high level of service and support to the construction industry.

OUR MISSION

An innovative and proactive organisation, consistently delivering industry leading façade solutions; renowned for excellence of product and superior customer service.

OUR VISION

To lead the industry through facilitating the successful delivery of innovative façade solutions, which stimulate the creativity of building design.

vitrabond®

ALUMINIUM COMPOSITE PANEL / MANUFACTURED BY FAIRVIEW

PRODUCT DESCRIPTION

Vitrabond is composed of two aluminium cover sheets sandwiched with a special homogeneous core material. It is a simple concept, resulting in outstanding surface finish and high workability, with an excellent strength-to-weight ratio.

Vitrabond is well suited for both exterior and interior architectural applications, as well as for industrial and specialty product designs. Applications include exterior cladding, signage, corporate ID, column covers, interior partitions, canopies, equipment enclosures and kiosks. The creative possibilities of Vitrabond really have no limits.

The versatility, combined with the availability of different panel fixing and jointing methods for vertical and horizontal joints, angles and curves, result in a smooth building envelope with no reduction in surface integrity.

Vitrabond ACP offers a unique combination of features and benefits that few other products can match.

ADVANTAGES OF VITRABOND

Throughout its history, Vitrabond has been proven to have excellent characteristics in many applications, such as exterior wall cladding, building envelopes, facades, louvers and feature walls. Based upon careful analysis, the key advantages of Vitrabond are listed below:

- Industry leading stock levels and lead times
- Cost effective
- Low maintenance
- Robust durability & strength
- Lightweight
- Large range of standard and stocked colours
- Unlimited colour range available
- Available in Natural Zinc, Stainless Steel, Natural Aluminium and Natural Copper

QUALITY

A dedication to the total fulfilment of our client's and customer's expectations is reected by a complete quality control system, beginning at the point of specification and continuing through to delivery of the guaranteed products. All activities are carried out in a manner which:

- Uses the framework of ISO9000 Quality Standards to verify the quality of our systems
- Ensures that our products and services are of the highest standards
- Create continuous improvements to our product through the application of the best quality practices.

ACCEPTABLE VARIATION

WIDTH	± 2.0mm
LENGTH	± 4.0mm
THICKNESS	± 2% for 4mm
BOW	Maximum 0.5% of the length an/or width
SQUARENESS	Maximum 5.0mm
SURFACE DEFECTS	The surface shall not have any irregularities such as dents, scratches and other imperfections in accordance with our quality assurance.

WARRANTY

The ACP coating warranty is issued on a project specific basis, and is available up to 20 years.

Contact Valcan for warranty details.

vitrabond®

ALUMINIUM COMPOSITE PANEL / MANUFACTURED BY FAIRVIEW

MATERIAL PROPERTIES

TYPICAL COMPOSITION

1. Peel-off Protective Film
2. Clear Coating
3. PVDF Coloured Coating
4. Primer Coating
5. 0.5mm Aluminium Skin
6. 3mm A2 core
7. 0.5mm Aluminium Skin
8. Polyester Anti-corrosion Coating

ALUMINIUM SKINS

Surface material both sides: 0.5mm Aluminium sheets of a minimum 3000 series grade.

CORE MATERIAL

The standard A2 rated core is a mineral filled core, the key component being the compound Aluminium Hydroxide.

DIMENSIONS

- Available thickness: Standard, 4mm (stocked). Custom thickness available.
- Panel width: Standard 1250mm, 1500mm. Custom 900-1800mm.
- Panel Length: Standard 2500mm, 3200mm, 4000mm. Custom max 6500mm.

WEIGHT

THICKNESS	WEIGHT (kg/m2)
4mm	8.1

FINISHES

STOVE LACQUERING

Vitrabond only uses the highly recognised PVDF KYNAR 500, FEVE or VITREFLON V700 paints known for their high durability. These premium paints provide an optimum resistance to weather and industrial pollution. More than 40 years of South Florida Exposure Testing is continuing to confirm the superior chemical and physical properties of fluoro polymer coatings.

Vitrabond has unlimited colour options, we are able to match any colour, from any other colour range. For a full list of standard Vitrabond colours, refer to the latest Vitrabond Colour Chart.

ANODISING

Vitrabond panels come in a range of Anodised finishes, offering both standard and customised colours and textures. It is possible to re-anodise Vitrabond in custom colours or designs. Contact Valcan for more information.

NATURAL FINISHES

Valcan offers the following natural finished panels:

- Vitrabond/ZN - Natural zinc composite panel
- Vitrabond/CU - Natural copper composite panel
- Vitrabond/SS - Stainless steel composite panel
- Natural Aluminium Vitrabond - uncoloured aluminium finishes

OTHER COATING FINISHES

The Vitrabond range also offers the following finishes:

- REPEL - A self-cleaning surface coating
- STATIC DISSIPATIVE (very low outgassing) Surface Coating - Designed for IT industries
- ANTI-BACTERIA Coating - to meet food handling and storage requirements
- SCREEN PRINTING for personalised design and imagery

For an ultra-durable vitreous enamel coated panel, please refer to 'Vitranamel', another Valcan product.

vitrabond®

ALUMINIUM COMPOSITE PANEL / MANUFACTURED BY FAIRVIEW

FIRE RESISTANCE

The Fire Resistance standards achieved with Vitrabond/A2 are as follows:

TEST STANDARD		RESULT
EN13501-1		A2-s1, d0
BS8414-1/BR135		PASS / COMPLIANT
BS8414-2/BR135		PASS / COMPLIANT
BS476.6		PASS – INDEX OF OVERALL PERFORMANCE: 0.0
BS476.7 Class 1		PASS – SPREAD OF FLAME: 0
TEST PARAMATER		RESULTS
FIRE SPREAD TEST RESULT TIME TS (MIN)		COMPLIANCE WITH PARAMETERS IN ANNEX A BR135:2018
External fire spread	> 15 minutes	Compliant
Internal fire spread (cavity)	> 15 minutes	Compliant
Internal fire spread (insulation)	> 15 minutes	Compliant

Vitrabond/A2 is used on a performance basis to meet fire resistance requirements for limited combustibility. However, for a product appropriate for use where non-combustible material is required, see Valcan's VitraDual non-combustible panel, tested to EN13501-1, achieving A1 rating.

WINDLOADING

Capacities based on material properties taken from AS1664.1 and verified by tests provided by Fairview Architectural.

Vitrabond ACP Properties

	4000	2.7	0.852	0.070	300	300	300	300

Stiffeners can be used for panel configurations that do not meet the serviceability criteria where strength is satisfied.

Stiffener to be 32x25x3.0mm U-section of A6005-T5 or A6105-T5 material fixed to the back of the Vitrabond ACP with a continuous strip of 25mm wide 3M VHB tape 4956.

Vitrabond ACP Fixing Specification:

A: Rivets / Cassette	Minimum dia. 5mm rivets for fixing the Vitrabond ACP to Z-section rails. Minimum 3 rivets per side, not including rivet securing the corner fold. Maximum spacing of rivets - 300mm. Minimum 25mm edge fold in Vitrabond ACP sheet. Minimum edge distance to edge of hole in Vitrabond ACP $e = 2xd_f$ ($= 10mm$ for 5mm rivet).
B: 3M VHB Tape / Flat Panel	Continuous substrate support is to be provided. Minimum 25mm wide 3M VHB tape 4956 in a continuous strip to all four panel edges. Prepare surfaces as per 3M specifications before applying tape.

Note: Extract from Enertren engineering assessment FAR-002. Please refer to the said document for design and construction notes.

Acrylic Tape	✓	✓
Silicone	✓	✓
Aluminium Z-Angles	✓	
Steel Tophats	✓	✓
Aluminium Stiffener	✓	
Aluminium Angle	✓	
Screws	✓	✓

FABRICATION METHODS

CUTTING

Vitrabond can be cut with a wall-saw, circular saw, bandsaw or jigsaw.
The requirements for a circular saw are as follows:

The cutting tool material to be carbide tipped, thickness 2-4mm	
Tooth geometry:	Trapeze/at
Tooth pitch:	10-12mm
Rake Angle:	5° (positive)
Clearance Angle:	15°
Max cutting speed:	500m/min
Max feed speed:	30m/min

CONTOUR CUTTING

Vitrabond panel can be contour cut with water jets, CNC routers, copy routers and jigsaws.

ROUTING/ FOLDING

Vitrabond panel can be cold shaped, enabling it to form various shapes and sizes.
A rectangular or V-shaped groove can be routed on the back of the panel, following potential fold lines. A thin layer of core should remain at the base of the groove.
The panel can then be hand folded along this groove, creating a precise and even fold. The outer radius of the fold can be determined by the shape and width of the routed groove.

There must be between 0.3mm and 0.5mm of core material left at the base of the routed groove. Too much material can cause delamination at the corner and result in a larger radius fold than desired. It will also make folding the panel more difficult and prevent the required fold angle from being obtained.

SHEARING

Shearing can be done with a guillotine. Ensure the blanking tools are padded. Shearing causes a slight roll down along the cut edge of the panel cover sheet.

PUNCHING

The punching of formed parts from Vitrabond is performed in the same way as a solid aluminium sheeting, using sharp tools and dies with minimal cutting clearance. Varying shapes may easily be punched with normal aluminium punching machinery. As with shearing, a slight roll down may occur.

ROLL BENDING

Vitrabond panel can be bent with a roll-bending machine. Use polished rollers free of imperfections only.

SCREWING

Vitrabond can be screwed with conventional stainless steel or galvanised screws for wood and metal. For outdoor use allow for thermal expansion.

RIVETING

Riveting is possible with the usual equipment and solid rivets or blind rivets. For outdoor use allow for thermal expansion.

vitrabond®

ALUMINIUM COMPOSITE PANEL / MANUFACTURED BY FAIRVIEW

DRILLING

Vitrabond panel can be drilled with centre point twist drills normally used for aluminium and plastics or machines common for metals. Drill material: High-Speed Steel (HSS).

BENDING

Bending is possible with a folding table or brake press. The inside bending radius is roughly 10 times the Vitrabond panel thickness. Use protective foils. There is more spring-back effect than with solid aluminium sheet. For serial production, tests should be made on sample panels.

GLUING

Usual metal adhesives or double sided VHB tape should be used. There is low adhesion to the core.

EDGE CLOSE-OUT & TREATMENT DETAILS

Vitrabond panel edges can be closed out as per below details:

A

B

C

D

E

F

INSTALLATION

CASSETTE FIX

Panels are fabricated into tray/cassette panels, this gives a discrete installation method with fixings in the joints. Joint widths typically range upwards from 15mm and panels can be flat or curved with joint depth/reveal depth varied according to design intent.

vitrabond®

ALUMINIUM COMPOSITE PANEL / MANUFACTURED BY FAIRVIEW

RIVET FIX

Panels are cut and installed as flat sheets with rivets used to attach the panels to the Vitrafix carrier system, colour matched fixings are available from the Vitrafix range. Joint widths are typically 8-10mm to allow for ventilation as a rainscreen system and panels can be installed as flat or curved according to design intent.

ADHESIVE FIX

Similar to rivet fix, panels are cut and installed as flat sheets with a suitable construction adhesive used to attach the panels to the Vitrafix carrier system, no fixings are visible. Joint widths are typically 8-10mm to allow for ventilation as a rainscreen system and panels can be installed as flat or curved according to design intent.

INSTALLATION GUIDELINES

The Vitrabond installation details are provided for conceptual purposes only. These are not the only methods that can be used to install Vitrabond, nor can they be used generically without consideration for each individual application. Good design engineering may preclude the choice of details used

- All sheets should be installed in the same direction as marked on the protective film to prevent possible finish variation.
- As minor colour variation can occur between production lots, it is recommended to place total requirement for a project in one order to ensure colour consistency.
- Where aluminium materials come in contact with dissimilar metals, a proper insulator or isolation tape should be applied to insulate between different materials in order to avoid corrosive and electrolytic action.
- For Cassette Fix, the bend-in portions between panel joints should not be caulked before strippable film is removed.

MISCELLANEOUS

PROTECTIVE FILM

- Make sure no damage will occur to the panel following removal of protective film.
- Remove protective film within 45 days of installation to avoid glue residuals on panel surface due to weathering.
- Do not apply PVC tapes, polyurethane sealant or Silicone sealant onto Vitrabond protective film. The plasticiser contained in these materials can penetrate the protective film and cause a gloss change in the coating.
- Do not apply spray paint or permanent marker to the film as the colour may penetrate the film and affect the panel.

SUSTAINABILITY

Vitrabond has been designed with an expected performance life of over 50 years.

All Valcan products have been developed with the health of the environment and community in mind. As part of our commitment to using recyclable or reusable materials wherever possible; all Vitrabond ACP is recyclable.

PROTECTIVE FILM

- Considerable care should be taken in the handling of Vitrabond.
- Vitrabond panels are sensitive to impact, particularly shocks from small, hard objects, which can dent the aluminium cover sheet.
- A minimum of two people should be used when moving large sheets to avoid scratching.
- To prevent surface damage when stacking Vitrabond, there should be nothing between the panels.
- Vitrabond should be stored in a cool and dry area where temperature is relatively stable.
- Pallets of Vitrabond should be stored horizontally with adequate support to prevent sagging.
- Stacked pallets should be identically sized and not more than four (4) pallets high.
